

GASTRIC BALLOON

KEY FEATURES

Completely reversible
No surgery or scars
Home the same day
Suitable for patients with BMI over 27
Back to full activity in 3 days

PROVEN BENEFITS

Reduction in Type 2 Diabetes from 32.6 to 21.3% at 12 month follow up.

Reductions in gouty arthritis and triglyceride levels.

Reduction in cholesterol levels from 33.4% to 16.7%.

Reduction in hypertension from 29% at enrolment to 16% three years later.

Along with lifestyle changes many patients maintained reductions in diabetes, cholesterol and osteoarthritis over the three years.

WEIGHT LOSS

Expect weight loss of around 10-15kg in the first 3 months*.

At the end of the 12 month program patients can reduce their weight by up to 10-30 kg*.

As with any life style change results depend on change! CompleteCare is designed for you to achieve this change.

**Weight loss results vary from person to person*

GASTRIC BALLOON

Gastric Balloon is a weight management procedure which is performed with no Surgery (no scars). It is reversible. As it is performed at the Day Surgery Centre, you can return home on the same day.

Currently insertion of Intra-gastric Balloons are not covered by Private Health Insurance or Medicare. HealthyWeight Australia offer affordable competitive pricing option, keeping with our mission of "Affordable medical care to patients"
